

A photograph of a surgical team in an operating room. Several surgeons wearing green scrubs and surgical caps are gathered around a patient. In the center, a monitor displays a real-time ultrasound image. The text 'REAL-TIME' is overlaid in green, 'INTRAOPERATIVE' in white, and 'IMAGING' in white. The bk5000 logo is also visible on the monitor.

REAL-TIME

INTRAOPERATIVE

bk5000

IMAGING

bk 
medical

- Dedicated surgical ultrasound system
- Simple workflow and small footprint
- Wide range of intraoperative, sterilizable transducers
- Immediate, auto-optimized imaging using the No-touch Autogain and Auto Focus features

INTRAOPERATIVE SURGICAL ULTRASOUND

The bk5000's outstanding image quality allows you to clearly see the margins of lesions and helps you achieve the best outcome for your patients.

OPEN SURGERY

The T- and I-shaped transducers are ideal for scanning the liver, pancreas, and kidney and visualizing anatomy in transverse and sagittal planes.

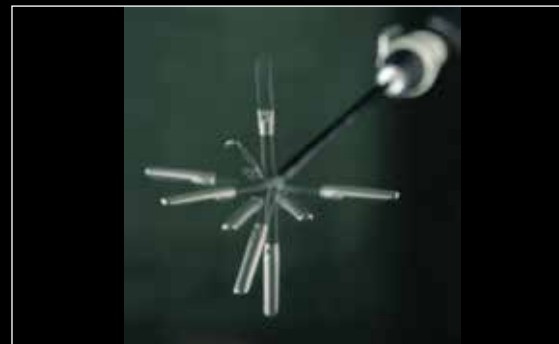

Liver lesion shown using the T-shaped intraoperative transducer.

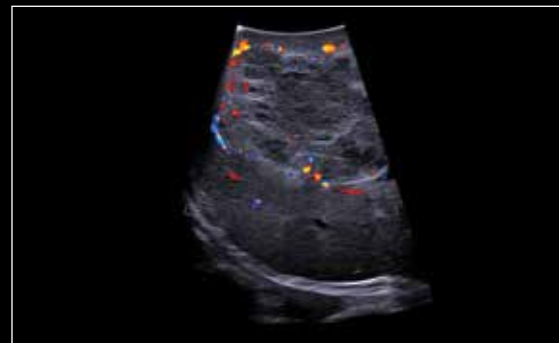

Echinococcosis (parasitic disease) of the liver shown using the I-shaped intraoperative transducer.

MINIMALLY INVASIVE SURGERY

The I12C4f laparoscopic transducer has a 4-way flexible tip that allows good organ contact, helping you explore and visualize difficult-to-reach anatomy during minimally invasive procedures.

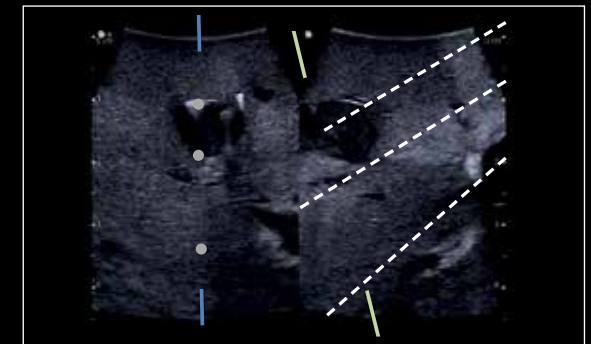

The flexible tip of the laparoscopic transducer is ideal for difficult-to-reach anatomy.

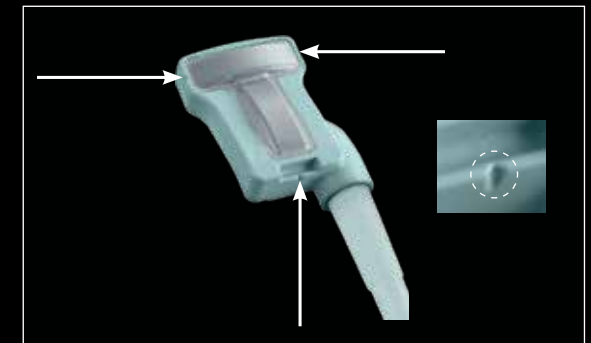

Liver hemangioma shown using the laparoscopic transducer and color Doppler.

INTERVENTION/NEEDLE GUIDANCE

The I12C5b biplane transducer with simultaneous visualization of transverse and sagittal planes is designed for guiding biopsies, needle placements, and ablation procedures of the liver.

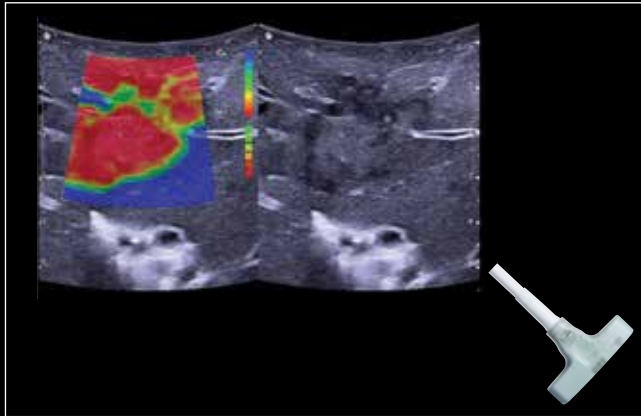

Markings on the screen help orient the two planes during simultaneous viewing.

The unique intraoperative biplane transducer shown with multiple needle channels for steering ablation needles.

DEDICATED INTRAOPERATIVE ULTRASOUND SOLUTION

DESIGNED FOR SURGERY - bk5000

- BK's Prism technology generates high-resolution, real-time images to show more detailed anatomy.
- No-touch Autogain and Auto Focus features immediately optimize images with no need for manual adjustment.
- Rapid boot time and up to two hours of plug-free imaging.
- Sterilizable remote control for convenient control of the system in the sterile field.
- Small system footprint - to fit in the OR.

FULLY STERILIZABLE, SPECIALIZED TRANSDUCERS DESIGNED FOR INTRAOPERATIVE IMAGING

- Ergonomically designed for a secure and comfortable grip.
- Long transducer cables (up to 3.0 m / 9.8 ft) allow flexibility during scanning.
